

DP SERIES 100% POLYESTER FILTER ROLLS

Filter rolls are extensively used for machine tool coolants and cutting & lubricating fluids found throughout the metalworking industry. Our polyester media is extensively used in applications where higher levels of filtration are required or tougher process conditions requiring a more robust filter roll including higher temperatures. When in operation the polyester filter rolls filter the contaminant, building up an efficient filter cake. Due to its higher efficiency our rolls are often used in effluent treatment plants and sometimes as a final coolant filter in a multi stage system.

Grade	Weight	Material	Tensile Strength	Typical Application
HU100	100g/sqm	100% Polyester Needlefelt	MD 170 N/5cm	Effluent, Final Coolant Filter
			CD 220 N/5cm	
INTNI150	150g/sqm	100% Polyester Needlefelt	MD 250 N/5cm	Effluent, Final Coolant Filter
			CD 350 N/5cm	

When ordering please specify the width (mm) Length (M) & Grade
